Implications for Educators

You have probably seen these students before. They sit in your classroom, obviously bored with what you are teaching, almost defying you to make them learn. The students’ performance in most academic areas is below grade level, and it seems as if they do not care whether they improve academically. At times, however, these students do show signs of brilliance, but it is limited to the few learning situations that interest them. The rest of the time they are ambivalent and disinterested. Could these students be gifted underachievers?

What is the NRC/GT?
The National Research Center on the Gifted and Talented (NRC/GT) is funded under the Jacob K. Javits Gifted and Talented Students Education Act, Office of Educational Research and Improvement, United States Department of Education. The mission of the NRC/GT is to plan and conduct theory-driven quality research that is problem-based, practice-relevant, and consumer-oriented.

Products available from The National Research Center on the Gifted and Talented...

Research-Based Decision Making Series
These papers are designed to advise practitioners and policymakers about the most defensible practices that can be implemented based on accumulated research evidence.

Research Monographs
Research Monographs describe research studies completed by the NRC/GT.

Practitioners’ Guides
These tri-fold brochures feature easy-to-understand research findings coupled with practical implications for classrooms and homes on topics of interest to educators and parents.

Video Training Tapes
Tapes are available of all our popular teacher training modules. Reproducible teacher resource guides are included with each tape.

Resource Booklets
These include information on various topics or sources of information in the field of gifted and talented education.

Collaborative Research Studies
Applied or action research is featured rather than a review of extant literature.

What is Underachievement?

In basic terms, underachievement is seen as a discrepancy between a student's academic potential and how he or she is actually performing in school. This potential is often revealed through performance on intelligence and achievement tests, as well as observational data. The disparity between potential and actual performance is often quite noticeable for the gifted underachiever.

What Causes Underachievement?

There are a significant number of causes outside of the school setting that can lead to high ability students not realizing their full potential. Important among these are those that relate to the family and the community in which one lives. For example, many gifted individuals underachieve simply because their parents do not stress the importance of academic achievement and how it can translate into success in the future. These parents do not set high standards or expect their children to reach them. The message the child receives is that academic success is not to be valued and therefore, "Why should I try?" Issues such as divorce or strained relations between the child and another family member can result in underachievement as well. The stress often produced in such situations overshadows any interest in performing well at school.

In terms of the community, peer group pressure can be a primary culprit that leads to underachieving among the gifted. Performing well in school may cause a student to be labeled as a "nerd" or other derogatory term. Academic excellence is not valued by many students. As Reis (1995) stated, "school and academic achievement became relevant because of its usefulness in the area of personal interest" (p. 18).

What Can Educators Do?

As Davis and Rimm (1994) point out, "Children are not born underachievers. Underachievement is learned behavior, and therefore it can be unlearned" (p. 291). Following are some positive recommendations to help educators enable their students to reverse the underachievement process.

- **Ensure that opportunities are provided for academic challenge within your classroom.** High ability students need to be given assignments that challenge them intellectually and enable them to use higher order processes and skills. Gifted students often find the most difficult classes are also the most enjoyable. As Reis, Hébert, Díaz, Maxfield, and Ratley (1995) noted, "Another major factor that students attributed to their successful academic achievement was their involvement in honors' classes" (p. 158).

- **Provide opportunities for these students to pursue topics of interest through independent projects.** Instead of providing "busy work" for students who complete assignments before everyone else, allow them to investigate topics outside the curriculum that they find stimulating. Emerick (1995) studied young adults and found that "the class that provided opportunities for independent study in areas of interest was believed to promote academic excellence" (p. 20).

- **Help underachieving students set realistic goals that they can eventually reach.** Avoid comparing students to others in a competitive atmosphere. Stress your belief that these students can be successful and that you believe they have the potential to do well. Help students recognize their achievements by helping them set and measure their own goals (Siegle, 1995). Your guidance as a teacher cannot be underestimated. Reis et al. (1995) discovered that all of the students they studied "cited teachers at the elementary or junior high school level who had been influential in their school lives . . . who nurtured their belief in self, their motivation, and their overall well-being as young adults" (pp. 149-150).

- **Encourage students to pursue out of school interests.** Underachievers may begin to realize there is a relationship between their interest areas and academic content. As Emerick (1995) stated, "school and academic achievement became relevant because of its usefulness in the area of personal interest" (p. 18).
